

# The Kangaroo

**The Kangaroo is part of the family of marsupials. The main characteristics of the kangaroo are their pocket where their babies can develop.**

**They can move on their four legs but also make big jumps with their powerful posterior legs.**

All the kangaroos live in Australia, New-Guinea and Tasmania.

They are herbivorous and insectivorous.

They act at night, to avoid their predators, like dingos and dogs.

# Lexical

Pocket : Poche

Marsupials : Marsupiaux

Insectivorous : Insectivores

To act : Agir

To avoid : Eviter
