

A close-up photograph of a tiger's face, showing its eyes, nose, and mouth. The tiger's mouth is slightly open, revealing its sharp teeth. The background is a blurred, warm-toned surface.

# THE TIGER

The tiger is a member of the Felidae family. It is the largest animal of the category. The tiger is from eastern and southern Asia. It used to live across Asia, from west Turkey to the eastern coast of Asia. It is an apex carnivorous predator. The Tiger can reach up to 3.3 metres. It has exceptionally stout teeth, and its canines are the longest among living felids. Its crown can be 74.5 mm long (2.93 in) and even 90 mm long (total length). It can weigh up to 300 kilograms. The tiger's coat is from light yellow to dark orange with black stripes. The coat is creamy white on the inside of the limbs, chest, throat and cheeks, lower jaw and above the eyes .

**The tiger is a predator  
twilight: they mostly hunt at  
sunrise and at the end of the  
day, but may also hunt during  
the day . He locates its prey  
without using his sense of  
smell.**

**The tiger eats only meat and is a carnivore. Its main preys are of average weight (from fifty to two hundred kilograms), it attacks mainly wild boars and deers.**
