

# The Polar Bear

## About the Polar Bear :

The polar bear lives in the Arctic Circle. It lives on the ice field. It's the world's largest land carnivore. An adult male weighs about 350-680kg!

## Its adaptations :

The polar bear is very well-adapted in its environment because it has a thick layer of fat and a big fur which insulates it from the cold. These adaptations also allow it to swim easily in the freezing water.
